HDD to SSD Replacement Lab

Author: Rutva
Skill Area: IT Support / Computer Hardware Maintenance
Lab Source: JobSkillShare Virtual Lab

Lab Overview

This lab involved replacing a traditional Hard Disk Drive (HDD) with a Solid-State Drive (SSD) to improve system performance and storage reliability.

Objective

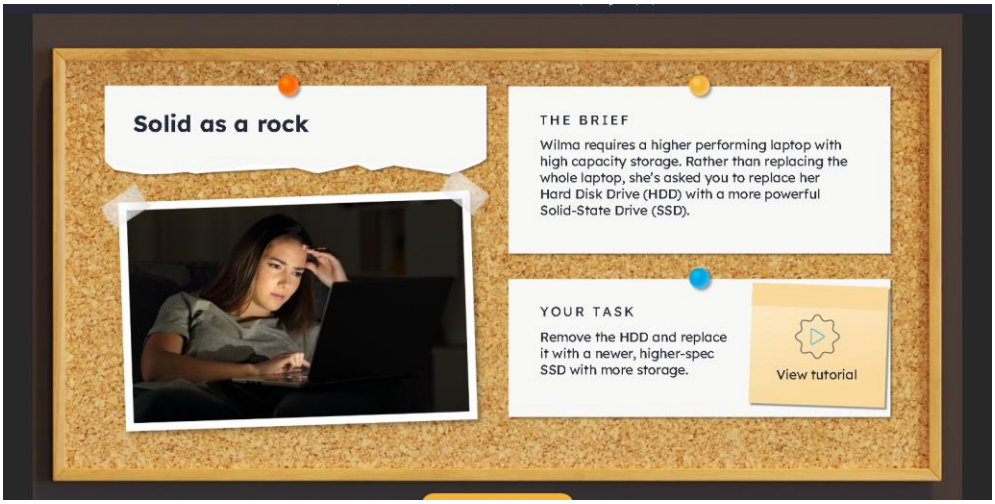

- Remove an existing HDD from a laptop.
- Install a higher-performance SSD.
- Verify successful installation.
- Demonstrate practical IT support hardware skills.

Business Scenario

A user required improved laptop performance and additional storage capacity. Instead of replacing the entire laptop, the existing HDD was upgraded to an SSD.

Benefits

- Faster boot times
- Improved application performance
- Better durability
- Lower power consumption

Procedure Performed

Step 1: Preparation

- Backed up important data.
- Ensured anti-static working conditions.
- Gathered necessary tools.

Step 2: Access Internal Components

- Opened laptop casing.
- Located existing HDD.

Step 3: Remove HDD

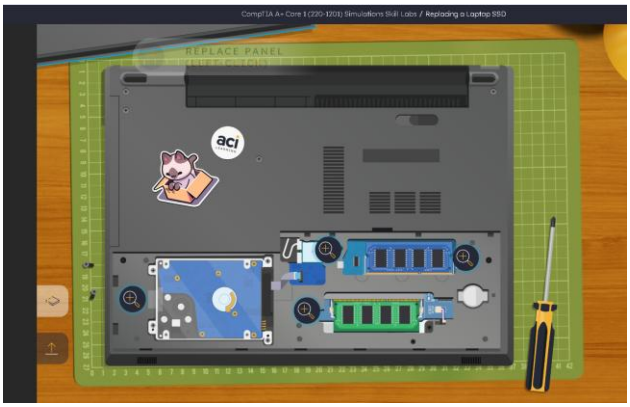

- Disconnected SATA connectors.
- Removed HDD mounting screws.
- Carefully removed HDD.

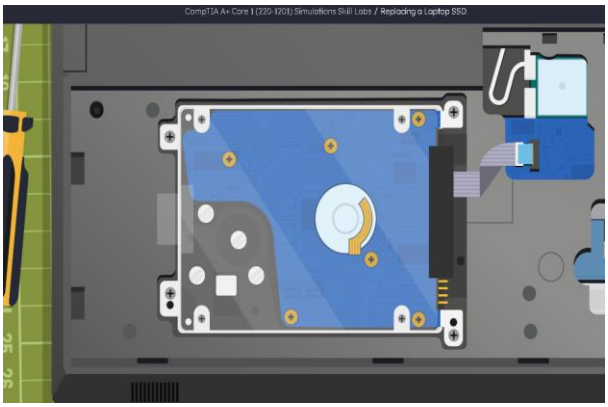

Step 4: Install SSD

- Inserted WD Blue SATA SSD.
- Connected SATA interface.
- Secured SSD into drive bay.

Step 5: Verification

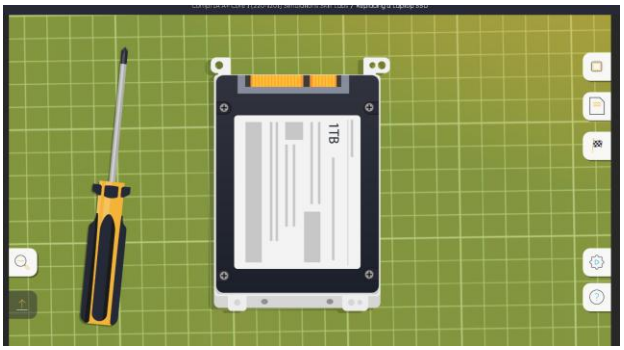

- Reassembled laptop.
- Booted system.
- Verified SSD detection in BIOS.

Best Practices Followed

- Data backup completed before upgrade
- SSD compatibility verified
- Proper tools used
- Anti-static precautions followed
- Hardware connections verified before power-on
